# StaffingNation Workforce Management Platform

## Contingent Workforce Management: Solved

StaffingNation is a solution for managing your global contingent workforce, empowering you to seamlessly manage your entire workforce, including self-sourced workers, agency-sourced/staffed workers, SOW/vendor-owned workers, and independent contractors.

## The Core Benefits

### Paperless Onboarding

All required employer documents, including tax forms and work authorization forms, are automatically delivered to workers and presented in a clear and elegant way.

### Talent Pool

Talent Pool is a list of workers who have worked with in the past, who you are currently working with, and who you want to work with in the future and it's the first place you should go when you want to source for a new opening.

### SOW Management

Create the project in StaffingNation and invite the vendor. The vendor can upload all project workers into the system for your review and provisioning, allowing you to confirm all required details, including a background check attestation, and manage all workers in one place.

## Hybrid VMS

StaffingNation's VMS capabilities allow you to efficiently source, select, and engage the right talent for your specific needs by facilitating seamless collaboration with all of your suppliers.

- Utilize the vendor dashboard to monitor the performance of all of your suppliers.
- Provide candidate vetting questions upon creating an order.
- Take the stress out of interview scheduling by providing the hiring panel's availability for interviews upon interview request.

## Independent Contractor Compliance

We have a complete independent contractor evaluation process within our system where we ask questions about the project, contractor, and management to determine if your proposed candidate qualifies for independent contractor status.
